MYOSITIS CLASSES

Understanding these classifications helps in accurate diagnosis and the development of appropriate treatment plans for individuals with myositis.

MSU Myositis Support & Understanding

EMPOWERING THE MYOSITIS COMMUNITY

DERMATOMYOSITIS

Dermatomyositis (DM) is a rare inflammatory myopathy that affects fewer than 200,000 people. It is characterized by chronic inflammation, distinctive skin rashes and muscles weakness or fatigue. There are several subgroups based on specific antibodies. These can be determined through a Myositis panel. It affects twice as many women as men. It is more common in African Americans. It typically affects adults between 40 - 60 years old. Juvenile Dermatomyositis can affect children as young as 2 years old.

SKIN SYMPTOMS	MUSCLE SYMPTOMS	OTHER COMPLICATIONS
☐ GOTTRON'S PAPULES KNUCKLES	☐ PROXIMAL MUSCLE WEAKNESS	☐ FATIGUE
☐ GOTTRON'S PAPULES ELBOWS	☐ MUSCLE FATIGUE	☐ CALCINOSIS

CLINICALLY AMYOPATHIC DERMATOMYOSITIS

Amyopathic Dermatomyositis (ADM) and Hypomyopathic Dermatomyositis (HDM), together referred to as Clinically Amyopathic Dermatomyositis (CADM), are subsets of Dermatomyositis (DM), one of the Idiopathic Inflammatory Myopathies. The cause is unclear and there is no cure. CADM is also referred to as skin-predominant dermatomyositis.

SIGNS & SYMPTOMS

- ☐ SKIN RASH/DISCOLORATIONS
- ☐ GOTTRON'S PAPULES
- ☐ GOTTRON'S SIGN
- ☐ SCALP ITCHING
- ☐ HAIR LOSS
- ☐ TELANGIECTASIA (NAIL FOLDS)
- ☐ NONEROSIVE POLYARTHRITIS
- ☐ JOINT INFLAMMATION
- ☐ VARIED LUNG DISORDERS
- ☐ DYSPHAGIA (SWALLOWING)
- ☐ DRY, SCALY, TOUGH SKIN
- ☐ FATIGUE
- ☐ WEIGHT LOSS
- ☐ LOW GRADE FEVER
- ☐ MYALGIA (MUSCLE PAIN)
- ☐
- ☐
- ☐
- ☐
- ☐

OTHER COMPLICATIONS

- ☐ GI ULCERS/PERFORATIONS
- ☐ CALCINOSIS
- ☐ RAYNAUD'S PHENOMENON
- ☐ DYSPHONIA (HOARSENESS)
- ☐ PANNICULITIS (FAT INFLAMMATION)
- ☐ IRREGULAR HEARTRATE
- ☐ CARDIOMYOPATHY
- ☐ CONNECTIVE TISSUE OVERLAPS
- ☐ CARDIOVASCULAR DISEASE
- ☐ CANCER RISK
- ☐ ASPIRATION PNEUMONIA
- ☐
- ☐
- ☐
- ☐
- ☐
- ☐
- ☐
- ☐

POLYMYOSITIS

Polymyositis (PM) is a rare inflammatory myopathy characterized by chronic muscle inflammation and weakness. This muscle weakness can develop over a period of days, weeks, or months. PM affects twice as many women as men. Studies indicate it is more common in African Americans.

MUSCLE SYMPTOMS

- ☐ PROXIMAL MUSCLE WEAKNESS
- ☐ SYMMETRICAL MUSCLE WEAKNESS
- ☐ ARTHRITIS
- ☐ MYALGIA (MUSCLE PAIN)
- ☐ DYSPHAGIA (SWALLOWING)
- ☐ FATIGUE
- ☐ LOW GRADE FEVER
- ☐ DYSPNEA (SHORTNESS BREATH)
- ☐ DYSPHONIA (HOARSENESS)
- ☐ DIFFICULTY STANDING
- ☐ DIFFICULTY TURNING
- ☐ DIFFICULTY LIFTING

Immune-Mediated Necrotizing Myopathy

Immune-Mediated Necrotizing Myopathy (IMNM) also known as Necrotizing Autoimmune Myopathy (NAM), is a rare autoimmune muscle disease and one of the idiopathic inflammatory myopathies (IIM). The cause is often unknown, and there is no cure. IMNM is divided into three subgroups: Anti-HMGCR Myopathy (linked to statin use), Anti-SRP Myopathy (sudden severe muscle weakness), and Antibody-Negative IMNM (diagnosed by muscle biopsy and high CK levels). It affects both men and women, typically between ages 40-60, and can mimic muscular dystrophy in children.

SYMPTOMS	OTHER COMPLICATIONS
☐ TRUNK MUSCLE WEAKNESS	☐ MUSCLE DYSTROPHY MIMICS
☐ DISTAL MUSCLE WEAKNESS	☐ ORGAN DAMAGE
☐ MUSCLE PAIN	☐
☐ FATIGUE	☐
☐ MUSCLE ATROPHY	☐

INCLUSION BODY MYOSITIS

Inclusion Body Myositis (IBM) one of the idiopathic inflammatory myopathies (IIM), is a complex, rare, and incurable autoimmune and degenerative muscle disease with an unknown cause. IBM leads to slowly progressing muscle weakness and wasting over months and years. While it can affect various individuals, it is more prevalent in men and those over the age of 50.

ANTISYNTHETASE SYNDROME

Antisynthetase Syndrome (ASyS) also known as Anti-Jo1 syndrome, is an autoimmune inflammatory myopathy (IIM) characterized by Autoantibodies to aminoacyl transfer RNA synthetases (anti-ARS). ASyS affects twice as many women as men. The average age of antisynthetase syndrome onset is 50. Antisynthetase Syndrome is associated with a number of known autoantibodies called aminoacyl-tRNA synthetase (ARS) autoantibodies. Anti-Jo-1, anti-PL-7, anti-PL-12, anti-EJ, anti-KS, anti-OJ, anti-Ha, and anti-Zo antibodies target aminoacyl-tRNA synthetases and represent Antisynthetase Syndrome.
